

HANGAR DOOR RENOVATION / RESTORATION

Well Bilt Industries can help you restore that old steel door system and bring it back to full functional operation and up to current codes.

Throughout the country, many airlines and corporate facilities are housed in old military hangars which are 50 plus years old.

Although the individual steel door panels are structurally sound, all of the components and/or moving parts are rusted, cracked and malfunctioning.

Replacement top guides, bottom steel wheels, bottom A.S.C.E. rail, and other components can be replaced on site.

Hercul-Eze® Operators can be custom designed and retro-fit to motorize your existing Rolling Door System.

Call Well Bilt Industries to discuss your hangar door / industrial door system and how it can become like new.
